Professional Summary

Technical support and healthcare professional with 15+ years of experience supporting clinical systems, training users, and troubleshooting real-time monitoring technologies. Skilled in Python, web technologies, and AI applications, with hands-on experience building and supporting software-driven solutions. Proven ability to onboard users, explain complex workflows, and provide high-quality support in fast-paced environments. Seeking to leverage technical, communication, and product support skills in a remote SaaS or mobile application environment.

Core Skills

- Product Support & User Training
 - Technical Troubleshooting & System Support
 - SaaS & Mobile Application Support
 - Workflow Documentation & SOP Adherence
 - Client Onboarding & Communication
 - Software Testing & Quality Assurance (UAT)
 - Data Analysis & AI Model Application
-

Professional Experience

Monitor Technician

Select Specialty Hospital | Danville, KY | Oct 2025 – Present

- Monitor and interpret real-time patient data, ensuring accuracy and rapid response to critical system alerts
- Maintain detailed documentation of patient data and system activity
- Collaborate with clinical teams to ensure effective communication and workflow efficiency

Monitor Technician

Lake Cumberland Regional Hospital | Somerset, KY | Aug 2005 – Oct 2025

- Supported continuous monitoring systems and ensured accurate data tracking in a high-volume healthcare environment
- Trained over 20 new hires on system workflows, monitoring tools, and operational procedures
- Provided technical support for monitoring systems and assisted staff with troubleshooting issues
- Maintained detailed records and ensured compliance with internal protocols

Patient Services Representative

ZOLL Medical (LifeVest Division) | Remote/On-Site | Jun 2013 – Sept 2025

- Delivered hands-on onboarding and training for over 500 patients and healthcare providers using wearable medical devices
- Served as primary point of contact for technical support, troubleshooting device issues and ensuring proper usage
- Conducted in-service training sessions for hospitals and care facilities
- Supported workflow integration and adherence to device protocols across multiple client sites

AI & Technical Projects

HeartSenseAI – Founder & Developer

2024 – Present

- Designed and developed a Python-based monitoring platform simulating real-time data processing and alert systems
- Built predictive logic and AI-based pattern recognition to identify critical conditions
- Focused on reducing alert fatigue and improving system usability through intelligent notifications

- Managed full project lifecycle including development, testing, and iterative improvements

Mira – AI Fall Prevention Assistant

- Developed an AI-driven system using computer vision and predictive modeling to detect and prevent patient falls
- Integrated real-time alerting and workflow support for care teams
- Focused on usability, accuracy, and reducing false alerts

Education & Training

Code:You – Artificial Intelligence & Python Track

2025

- Training in Python, NLP, LLMs, prompt engineering, and data analysis

Google AI - Professional Certificate

2026

Bachelor of Science – Paralegal Studies

Purdue Global University, 2016

Technical Skills

- **Programming:** Python, JavaScript, HTML, CSS
- **Tools:** GitHub, Jupyter Notebook, VS Code
- **AI & Data:** NLP, LLMs, predictive modeling, data analysis
- **Systems:** Healthcare monitoring systems, real-time data platforms
